

CRAB Design Systems Program in conjunction with **Autodesk®** is pleased to announce to Washington State Counties;

Technology Days 2012

The Design Systems **Technology Days** primary purpose is to provide the counties a variety of presentations to management, design, and support personnel in regard to Autodesk's current and future development of their design system software **Civil 3D®**.

We are very pleased to have from **Autodesk®**, Craig Sanders and his team of technical experts to present these sessions at no charge. As you may recall, Craig was last year's *Road Design Conference* featured keynote speaker and presented to us the significant switch that Caltrans did last year by selecting **Autodesk® Civil 3D®** for their DOT's road and highway design projects.

The CRAB Design Systems **Technology Days 2012** will be held in 2 locations;

- 1) CRAB offices in Olympia on **April 24th -25th**.*
- 2) Eastern Washington, Chelan County CTC **April 26th & 27th**.*

Here are just a few of the sessions being offered at **Technology Days 2012**;

1. **What's New in AutoCAD Civil 3D 2012**: New productivity-enhancing tools help speed the design and delivery of County Road Department projects.
2. **Civil 3D Questions & Answers**: Got a Civil 3D question? Just ask Autodesk Technical experts; Alan Gilbert, David Fagerman and Steve Stanfill.
3. **Roadway Design Visualization**: Communicate design intent during planning and public involvement meetings. Validate designs through visual simulations, so you can detect errors earlier, when they are less costly to fix.
4. **GIS to CAD in Civil 3D** – A lesson in how to extract meaningful features from geodatabases for CAD use with AutoCAD Civil 3D
5. **Discover the Power of BIM for Roads & Structures**: Gain insight into the top keys to working with Autodesk BIM solutions for transportation projects.
6. **Autodesk Infrastructure Design Suite**: A compelling solution that provides planning, model-based design, analysis, and visualization capabilities for infrastructure projects in a single comprehensive package.
7. **Civil 3D Solutions for Surveyor's**: How can County surveyors more effectively utilize the power of Civil 3D for their work, including LiDAR.

*This CRAB Design Systems **Technology Days 2012** event is **FREE** and the only cost is if you don't attend!
