

Feedback Reports resolved in SignRate 2.0

Report ID	Name	County	Date Logged	User Comments	Description
902	Kathy	CRAB	3/17/2008	Order of sign plate maint hist is random in grid. Order by date	Order of sign plate maint hist is random in grid. Order by date
903	Kathy	CRAB	3/17/2008	Add an option to the export for a date range so it exports faster.	Add an option to the export for a date range so it exports faster.
905	Kathy	CRAB	3/18/2008	I need an email address for the person that submits signRate to web services.	I don't have an email address to send them a confirmation email when signRate is done.
956	kathy	CRAB	11/26/2008	SignRate reference point showing *unknown*	For Adams County: SignRate road 11381, reference point at 2.148 shows as *unknown*. In Mobility, it looks fine. I checked the tables and could not find anything different between them.
974	Ron Russel	Adams	2/5/2009	Add date installed to signplate grid	Add date installed to signplate grid that displays on signpost page. Would be useful for inspections.
1120	Barbara O'Neill	Grant	8/21/2009	The Federal Highway Administration has put forth new MUTCD requirement that must be maintained for all traffic signs; all counties must be compliant by 2012	Requesting 2 fields be added to the sign plate page for reflectivity for observation and entrance angles
1128	Kathy	CRAB	9/8/2009		Adding new sign plate, but had not entered data yet. Clicked on save. Plate Type turned yellow. Clicked on close. No response. Clicked on Delete, Got System.IndexOutOfRangeException for Mobility.MaintenanceInventoryDate.Delete. To try to exit the SignPlate screen, I entered a plate type and then clicked Save. It appeared to Save and the plate screen closed, but the plate did not show up in the feature list or the signplate grid.
1174	Peggy Manspeaker	Jefferson	12/21/2009	It really isn't a big deal, it would just make the input easier if you didn't have to scroll down every time you pulled up a record.	I do a lot of the maintenance input (mostly culverts and some signs). When I pull up the maintenance screen. Maintenance Requests takes up the majority of the space. It would be nice to have the Maintenance History be the majority space holder since once a request is completed it is moved to history.
1192	Mitch Johnson	Chelan	3/17/2010	We are collecting GPS points for all of our signs Countywide and it would be nice to have a field in SignRate that would allow our sign crew to input the GPS Lat. & Long. directly into SignRate - then the GPS Lat. & Long. would be uploaded to the GIS Tab in Mobility. Gracias	GPS input field for SignRate
1195	Michelle Plumb	Adams	4/13/2010	If at all possible, for instances of visual inspections with no work done, would be helpful to fill out one date/code/reason record that could populate a maintenance record for post and all plates attached.	One-entry update field populate all inspection records for visual inspections.
1360	eric	Chelan	3/29/2011	Request from Mitch Johnson	Add GPS coordinate fields to signRate
1361	eric	Chelan	3/29/2011	Request from Mitch Johnson. Suggested putting control in GIS tab.	Add field for inputting file path of photo for sign post that is located on county server. This will help integrate with GIS system.

1373	Eric	CRAB	4/29/2011	Discuss adding changelogs (similar to roadlog audit trail) for all inventories to assist with a future field version of Mobility (similar to SignRate).
1400	eric	CRAB	5/25/2011	This is a best guess for why SignRate isn't working during training classes.
1404	Kathy	CRAB	5/26/2011	Make sure sign rate doesn't allow invalid dates. Check for valid input (as date) and reasonable date.
1415	Kathy	CRAB	6/7/2011	When entering a new sign post, clicking save when no data has been entered doesn't show which fields are required. User has no information about why post is not saved.
1447	Kathy	CRAB	7/7/2011	Add date plate installed to the grid displaying signplate info on the initial post screen.
